GARDIENS

GLADIOLUS

165 WEST ST.

WARRE, MASS.

GREETINGS FRIENDS:

Thanks again for all past favors. They were deeply appreciated.

We would like at this time to make a few comments on Glads grown by us this past season. Abu Hassan, an improved Pelegrina, not tall but dainty. Alarm was very good in the reds. Anna Mae for an extra early pure white. This has all the earmarks of a fine commercial variety. It will bloom from small bulbs. In the lavenders, Badger Beauty, Elizabeth The Queen and Elwood. They bloom in orders named, all are very good. Black Panther, just as the name says, black and very deep red. Burma, very deep and heavily ruffled rose. The very best in its color, one that is very sure to please. Cape Cod is very nice. Golden Beauty, a large exhibition Glad, open as many as ten at once. Hawkeye Red this year was exceptionally good, Commercial growers, will be growing this by the millions as soon as more of it becomes available. High Finance for a late smoky, very good. We have grown Intruder with up to six inches blooms. Leading Lady is still a hard one to beat, this is very outstanding, and will be grown by all Glad fanciers now that the prices are down. Mansoer, blood red with black velvet glow, enormous spike. Among the purples, King Lear, very ruffled; Purple Supreme, fine; and Vulcan; very good. Purple Wine, medium size floret on a tall spike. Rima, if the bulblets of this would only germinate better than they do. We had blooms of this variety up to six inches in diameter, and spikes sixty inches tall. Salmons Glory, extra large cream white, with a slight yellow and red blotch. This is a very outstanding novelty. Giant in size. Silver Gull, you watch for this. It is probably one of the very best silver blue varieties, to come from Holland to date. Solo Mio, earliest of all yellows. This will be grown in quantities by the market gardner on account of its earliness. No doubt there were many other varieties that were very outstanding in the garden this past season, but these are a few that come to my mind at this time. We've had a wonderful crop of bulbs this year, perhaps one of the best, in our sixteen years as a Commercial grower.

We are going to offer a few Do's and Don'ts for your Glad garden.

First: open package as soon as received. Examine your bulbs, and, if you are not ready to plant, store them in your vegetable cellar, or a place where it is not too warm or too cold. After your soil has been prepared in the Spring of the year, furrow out your rows and scatter in the bottom of the trench, a good Commercial fertilizer such as 4-12-4, 4-8-10, or 5-10-10 or any other good Commercial fertilizer, that is available in your community. One handful is enough for about four foot of row. Mix well with the soil setting large bulbs about five inches deep, and five inches apart, other size bulbs in proportion, with the smallest about two inches deep, and two inches apart. All Glad bulbs must be dipped before planting, in order to kill any thrips or disease that may be on them. We use Lysol. One and one-half tablespoonful per gallon of water. Soak bulbs three hours just before planting. Any water container will do. Do not plant near buildings, heavy rooted plants such as

trees, etc. Cultivate frequently enough to keep soil loose, and free from weeds, not too deep, and after every heavy rain or watering. Spraying for thrip (adults are small black insects about 1/16 of an inch long). U. S. Dept. of Agriculture recommends a proven spray, Tartar Emetic, 4½ level teaspoons, 10 teaspoons of brown sugar, and 3 gallons of water. Start spraying when Glads are about 7 or 8 inches tall and once every week or ten days or after every heavy rain. This should be done until the blooms come.

When cutting blooms be sure and leave at least four leaves so as to nature the bulb. Bulbs should be dug as soon as the foliage starts to become yellow or after a heavy frost. Dig bulbs when soil is dry if possible. Using a digging fork lift bulbs by the foliage. Cut tops off close to the bulbs shaking out loose dirt. Use shallow wooden trays or clean paper bags marking each variety. Curing and cleaning bulbs; remove bulbs to warm dry place. After a period of three or four weeks, or when bulbs are properly dried, old bulb is easily broken away from the base of the new bulb. Be sure and leave husk on bulb, as this is a protection in storing. Ideal storage temperature is between 34 and 45 or in a good vegetable cellar.

Terms of sale: Cash with order, or twenty-five per cent, the rest C.O.D. No order for less than two dollars and no item for less than ten cents please. We have made our prices low enough so as to eliminate all confusing discounts on both wholesale and retail. We are very liberal in our overcounts. All retail orders will be sent prepaid. If out of size wanted, we will ship next size, giving equal or better value.

If you send us names of friends that grow Glads with your orders, we will add extra bulbs as a reward.

These are State inspected bulbs. We try to and observe the fact that making friends is very essential to our business.

Sincerely yours,

TAYLOR GARDENS
